

PNEUMATIC VACUUM ELEVATOR

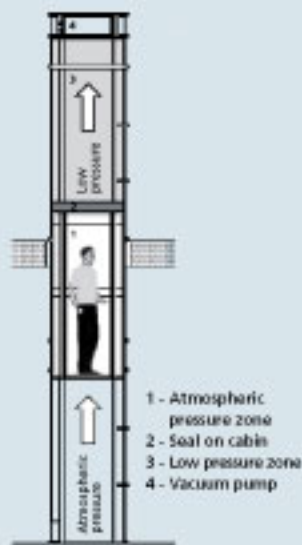

Introducing the **PNEUMATIC VACUUM ELEVATOR**,
the first residential elevator that runs merely by the forces of gravity.

**Step into the capsule, we're blasting off...
In the previous century this vision
was simply a figure of our imaginations,
a device people would only dream about.
Now in the 21st century, anybody can blast
off in their very own residential capsule!**

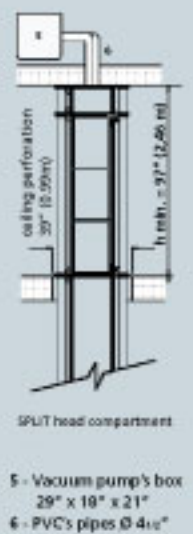

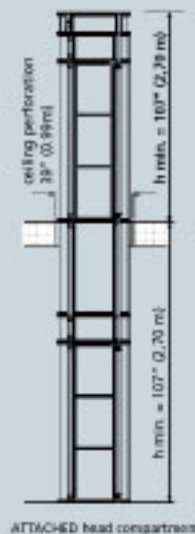

It is the vacuum created by the turbines that gently pull you up to the next floor, and the slow release of air pressure that floats you down. This unique self-supporting elevator comes in 2 compact sizes, can operate up to 35 feet height, maximum 4 stops, with no pit or hoist way required.

There are three main parts to the PNEUMATIC VACUUM ELEVATOR:

- The external cylinder, made up of an aluminium frame and polycarbonate transparent walls.
- The internal cabin, made of steel, including brakes and safety mechanisms.
- The head compartment, which houses the turbines (open vacuum pump) and the controller board. This compartment can be split, at remote location from the main cylinder if the top floor does not have sufficient height.

DIMENSIONS - 37 inch versions

Revolutionary new patented technology with outstanding features:

- No pit. No hoistway. No machine room – self-supporting and portable
- No cables. No pistons. No pulleys – lowest maintenance in the industry
- Smooth and powerful - 5 turbines lifting 205kg or at least 2 adults (37" model)
- Highest safety – lowers itself automatically to the ground during power outage
- Sophistication in design – aluminium frame with 360 degree panoramic view
- Competitively priced and no energy consumption during descent

Suitable for new or existing

- Link House
- Semi-D
- Bungalow
- Duplex Condo
- Shop office
- Retail Boutique
- Boat

Choose from

- 2 sizes: 37" or 52" diameter
- Up to 4 stops, maximum 35 feet height
- 3 colours: dark gray, light gray or white
- Head compartment attached or split
- Doors in-line or walk-through

At **AstorPrice Elevators**, master distributor of **THE PNEUMATIC VACUUM ELEVATOR**, we ensure to bring you the latest innovative technology coupled with sophisticated design. By the application of simple principles of physics, highest safety standards and advanced materials, who knows what we will offer next...time travel perhaps?
