## Continue living in your own familiar surroundings

**New!**

code no. 08/02 EN INTERNATIONAL

All Freelift products undergo continuous development. This means that the chair lifts and colours may vary from the illustrations in this brochure.

**"We wanted to stay in our own home..."**

"Even when using stairs became more difficult we didn't want to consider moving. We were willing to do anything to stay in our own home, even sleep downstairs if necessary – in fact we considered this the only solution. When we talked about the problem with the neighbour, he said, "Have you ever considered a chair lift?" We phoned our regional chair lift specialist immediately and everything was arranged in no time."

## **Don't let the stairs become an obstacle**

Maybe you've already noticed that your stairs are becoming an obstacle and you're considering moving or sleeping downstairs. You can put these thoughts out of your head: a Freelift chair lift ensures quiet and smooth transport to your upper floor under all circumstances, and provides you with the assurance that you can stay in your own surroundings.

## **A safe and secure choice**

A Freelift chair lift is an affordable and safe solution when you are finding it harder to go up and down the stairs. It is designed to save the maximum amount of space and to increase levels of comfort and safety. As the oldest producer of chair lifts in Europe, Freelift manufactures all the chair lifts itself. Behind every Freelift chair lift is over 100 years' experience – and this gives you 100% confidence.

## **Freelift fits into any home**

However difficult, curving or steep your staircase, a Freelift chair lift will always fit and is custom made within centimetre accuracy. And you're certain to find the price reasonable. Your regional chair lift specialist will be pleased to work it out for you.

## **Masterly lifts for any staircase**

With three types of chair lifts, Freelift provides the solution for any staircase situation. The Freelift Rembrandt and Freelift Van Gogh are specially designed for staircases with bends and small landing areas, while the Freelift Mondriaan is designed for straight staircases. The chair lifts are remote-controlled and are characterised by an efficient and rigorous design, so they do not take up a lot of room on your stairs.

*More comfort is hardly conceivable: by lightly pressing the remote-control button at the top and bottom of the stairs you can summon the lift and send it back. Sit down on the chair and the joystick will respond to the lightest touch – you are now in control.*

## **A palette of possibilities**

Attractive colours, an individual style, modest in form: the new Freelift chair lifts embellish every interior through their masterful capacity for combination. For the Freelift Van Gogh, the Freelift Rembrandt and the Freelift Mondriaan you can choose from a range of colours and options.

## **The ease of Freelift chair lifts**

Ease à la Freelift: sit down on the luxurious, comfortable seat.

A slight movement of the joystick takes the chair lift smoothly and silently upstairs.

The chair lift stops automatically at the top of the stairs.

In a single smooth movement you turn the chair and step out easily and safely, at just the right spot. Of course, the chair lift will bring you back downstairs in the same comfortable way.

## *The Freelift Van Gogh: masterly on staircases with bends*

Everything about the Van Gogh chair lift is designed to save space and maximise comfort. This luxurious chair lift runs almost silently, and effortlessly. Flex, cables and cable channels are a thing of the past. The compact, singular tubular rail (less than eight centimetres across) means that you save maximum space on your stairs. The Van Gogh is designed for the outside bend of the stairs.

**Van Gogh**

## *The Freelift Rembrandt: maximum space for other stair users*

The Freelift Rembrandt has the same luxurious and low-noise qualities as the Van Gogh but is specially designed for the inside bend of the stairs. Because the rail on the Rembrandt runs above the narrow side of the stairs, the broad section of the stairs remains completely free for other stair users.

**Rembrandt**

**Mondriaan**

## *The Freelift Mondriaan: complete freedom on straight staircases*

Freelift has a space-saving solution for straight staircases: the Mondriaan, which provides safe transport up and down even unusually steep stairs. The low-noise Freelift Mondriaan has a rigorous and highly compact design. When folded away the Mondriaan only takes up 32 cm. This leaves enough space for other stair users to pass safely and easily. Another advantage is the short delivery time.

## The Freelift chairs: it's your choice!

The Classic chair: standard on all Freelift chair lifts. Fitted with easy to clean, synthetic upholstery with attractive leather grain finish. Available in three colours:

The luxury Select chair: Upholstered for an elegant look and extra comfort. Adjustable foot support for optimum comfort. Folding seat scarcely takes up any room. Colours:

The Stand-up Chair: helps you when you are standing up and sitting down. With one movement of the joystick you are carefully brought into position. Available in three colours of upholstery:

## Rails in stylish colours

The rails for the Freelift chair lifts are available in three stylish colours that make a perfect match in every interior. Available at no extra cost. At this moment the Mondriaan only is available in Freelift beige.

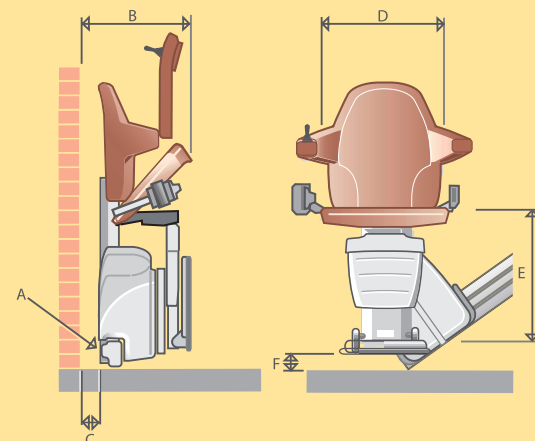

Does the rail obstruct passage? Or could someone trip over it? Freelift has the solution, with a handy folding rail: the protruding rail section folds up automatically, so that it never gets in the way of passageways or doors.

## Technical specifications

	Freelift Van Gogh/ Rembrandt	Freelift Mondriaan
A Dimensions of rail	diameter 76 mm	75 mm X 114 mm (b X h)
B Width folded	385 mm	316 mm
C Minimum distance to wall	82 mm	40 mm
D Space between armrests	438 mm	438 mm
E Seat height	452 mm	452 mm
F Distance between foot support and floor	83 mm	50 mm

The above sizes may differ according to the staircase and installation situation

## Installed in half a day

That's how long it takes to install a Freelift chair lift. Your regional Freelift specialist gets through the work in half a day without any demolition work or damage to the walls. Once it is installed you will receive a clear explanation of how to operate the lift. The fitter will take time to run through everything with you until you are fully au fait with the lift and its use: it will all become clear. This will allow you to use your new and comfortable Freelift chair lift safely for a long time to come.

## Service & quality: the security of Freelift

Of course, each Freelift chair lift comes with a comprehensive 12 month guarantee. The fitters working for your regional Freelift specialist are at your service night and day, 7 days a week.

Every Freelift chair lift can lay claim to over 100 years of experience. Whether in the field of safety, innovation, comfort or design - the stair lifts are unsurpassed in terms of quality. As testimony to this, Freelift is one of the first chair lift manufacturers to be awarded ISO 9001:2000 quality certification from the Bureau Veritas Quality International. And this is one of the main reasons why your regional chair lift specialist has opted for Freelift.

Tested and approved by independent European testing institutes: Freelift complies with the strictest standards of quality and safety.

## Freelift: safety first

Apart from being comfortable, Freelift chair lifts are of course 100% safe. Each chair lift comes with a safety belt, which gives a feeling of protection and security. The handy joystick is extremely easy to operate and can be fitted on either the left or right armrest. To prevent unauthorised use, you can simply remove the key from the switch.

The rail has a smooth finish to prevent injuries. Protection against jamming is optimum: the chair lift stops immediately whenever it encounters an obstacle on the stairs. And when the chair lift arrives upstairs or downstairs it turns smoothly in the desired direction, so you can step out of it easily. Freelift: safety first!
